

CAPABILITY STATEMENT

Go Charge is an innovative Australian provider specialising in Charge Point Management solutions.

Our mission is to streamline the integration and management of electric vehicle (EV) charging infrastructure, ensuring ease of use for both owners and drivers of EV charging equipment.

With our extensive industry experience and expertise, Go Charge is your trusted partner in transforming EV charging assets into a profitable, reliable, and user-friendly network.

EV Charging Made Easy

Go Charge software supports a broad range of charging applications including:

- Public charging
- Workplace and fleet charging
- Charging in apartments/strata buildings
- Compare the com
- Custom branding and features

Go Charge is designed to be scalable, and for the self-management of chargers, making it ideal for monetising a single charger, growing a network, or managing large-scale charging operations.

Go Charge specialises in real-time payment functionality, enabling EV drivers to easily pay for charging sessions and for charger operators to confidently dispense electricity with minimal risk of non-payment.

We take care of the intergrations making it easy.

Our software platform is brand-agnostic, compatible with any OCPP-compliant charging station, and has been integrated with more than 30 leading brands of charging hardware.

Features and Benefits:

Go Charge's comprehensive range of EV charging software includes a mobile app, charger management platform, and load management system options.

1. Go Charge App for EV Drivers

The Go Charge app is a mobile app for EV drivers to locate chargers on any enabled network, and to charge and pay on Go Charge-connected chargers.

With the Go Charge App EV Drivers can:

- Find nearby chargers
- Identify faster and slower chargers
- Use filters to show chargers with specific features
- View important information about the charger such as opening hours
- See amenities at the charging location

Drivers using chargers connected to the Go Charge network can also access:

- Real-time availability of Go Charge-powered chargers
- Detailed pricing information
- Easy payment through the Go Charge App,
 RFID card or intergrated Tap and Pay devices.

The Go Charge App is used by EV drivers and is available on the App Store and Google Play.

2. Branded App Solution

For clients seeking their own branding, we offer a custom-branded White Label App, maintaining full functionality of the Go Charge Hub back-end but with your branding on your asset across the driver and user experience.

We tailor the driver app, support channels, and experience to your brand, just how you want it (Conditions apply).

3. Go Charge Load Management System

The Go Charge Load Management System (LMS) is cloud-based technology that monitors and optimises the distribution of available power to EV charging stations, facilitating safe, efficient charging for CPOs. The Go Charge LMS is a stand-alone product and does not need to be used in conjunction with the Go Charge App or Go Charge Hub.
